

Series 5

Stackable Folding Chairs

Made in the USA, ensures consistent quality as well as excellent customer service before and after the sale.

Constructed of HSLA (High Strength Low Alloy) tempered U.S steel provides light weight without compromising strength.

Small details make a big difference: custom designed high strength rivets, not screws; taper crimped braces; drain holes for a dry seat.

The McCourt Series 5 is the only chair of its kind completely produced in the United States. We use only U.S. steel, plastic components and craftsmanship to manufacture this classic chair.
